

CUT STONE PATIO - BEFORE AND AFTER

Overlays such as SM Professional Grade are tailor made for upgrading or restoring the appearance of damaged or worn concrete. In this album, the first two photos show the original surface. The concrete is cracked and marred with chips, rock pops, and discoloration. The remaining photos show how the surface is not only repaired, but majorly improved with the addition of some texturing, color, and design on an overlay. Legacy Tinte D'Aqua water-based stain was used.

Products Used In This Album
