Brickform's® suite of decorative stains provide permanent, long lasting color to concrete surfaces. Both the ARTesian™ water-based stain and E-Stain™ reactive stain, prevent exposure to Volatile Organic Compounds or VOCs.

While all Brickform's® stains are notable the E-Stain™ is especially unique. Its composition stands alone, as it is the only reactive stain on the market made without hydrochloric acid, making it much safer to use and handle. It is also the only reactive stain that may be shipped as a non-hazardous material. Finally, Brickform® stains are the only stains on the market that do not use Sodium Dichromate, a cancer causing chemical present in large quantities in comparable formulations.

VOC Limits		
Product	Actual VOC g/l	SCAQMD #1113 (LEED Standard)
Brickform E-Stain™	0	100
ARTesian Stain™	0	100
